*Stopping Child Maltreatment through Pan-European Multiprofessional  
Training Programme: Early Child Protection Work with Families at Risk*

**Trainer Handbook**

University of  
St Andrews

## Introduction

**ERICA:** Stopping Child Maltreatment through a Pan-European Multi-Professional Training Programme: Early Child Protection Work with Families at Risk

The ERICA Project was conceptualised and designed to enhance international and global protection for children and families and aid in the prevention of child maltreatment. Financed by the European Union's Rights, Equality and Citizenship Programme, the ERICA Project aims to integrate and pilot best practices and risk assessment tools for pan-European use. The training programme seeks to build the expertise of frontline professionals who work with children, providing comprehensive strategies for multi-sectoral practice and increasing knowledge of child maltreatment, risk identification and protective factors. Piloted across seven European countries, the training programme is being co-constructed with fifty professionals from each country, strengthening inter-agency and international co-operation in the detection and prevention of child maltreatment.

### Main aims for each training module

Module 1	Introducing the ERICA project
Module 2	Understanding the consequences of maltreatment on child development
Module 3	Recognising early signs of maltreatment within the family
Module 4	Understanding risk factors for child maltreatment
Module 5	Engaging with tools for risk assessment
Module 6	Improving my skills for identifying maltreatment situations intervening
Module 7	Understanding protective factors and learning how to build them
Module 8	Evaluation

### Material adaptability

Please note that provided materials are open for alterations and changes, according to your needs. Throughout the PowerPoint slides text written in red is intended to be adapted prior to carrying out the training according to the audience needs.

Module order and number of modules can also be altered according to your needs. In majority of 7 countries, where the training was piloted, Module 7 followed Modules on Risk Factors (either Module 4 or 5).

**The trainers should be given a document that sums up information needed for all the modules.**

- Overall Long-term ERICA Training Objectives
- The key principle in ERICA training:
  - o the importance of experiential knowledge and reflexivity (reflecting on your personal experience and on other people's personal experiences, not just on theoretical concepts)
- How to handle ethical/legal issues that often arise during training on child maltreatment: for example if professionals being trained are clearly worried about a current maltreatment situation. Helplines, emergency numbers to call.
- List of participants (ideally with names, professions, institutions, job location...),
- Dates, schedule for each day of training, location/venue
- the whole ERICA training programme (8 modules + feedback day etc)

**Make sure the trainers have all the necessary training material resources available (pc, wifi, paperboard....)**

**Make sure the trainers have the necessary administrative document to be signed by participants and trainers at the end of the training (presence sheets etc).**

**For each module, ideally trainers would have Trainer Guidelines giving the list of learning exercises that are specific to that module.** For each learning exercise, the Trainer Guidelines would indicate the following:

- the aim of this exercise (ILO)
- description of the exercise: role plays, group exercises, testimonies, self-assessment exercises, interviews, videos, group discussion
- describe how the trainer presents the exercise
- the approximate length of the exercise,
- the learning tools (powerpoint...)
- instructions to give to the participants (for example, for the Testimony: "*When listening to the expert by experience, be quiet till the end, you can ask questions at the end, try to note what surprises/moves you...*")

### **Covid-19 situation awareness**

The questions facilitating discussion of or providing information about the child maltreatment in Covid-19 situation have been included throughout the modules. We would ask you to be prepared to address and communicate the topic beyond these facilitations if you see it being relevant or being raised by trainees. In general, please be aware of the Covid-19 and the limitations it may raise to the training, trainee availability and their personal lives.

The limitations raised by Covid-19 have affected everyone, and vulnerable children and adolescents especially.

## **Training modules**

### **Module 1: Introduction**

#### **Learning Objectives**

- What is child maltreatment, covering all forms of abuse and neglect, including rape and sexual abuse and bearing in mind that countries use different terminology
- Defining children as between the ages of 0-17
- Understanding of the main purpose of the training, who is being trained, who are the final beneficiaries and how it is funded
- Understanding the structure of the course, the modules, and how participants can use the material (are some modules mandatory, others optional? What is core?)
- Understanding how they can give feedback, or discuss points, or clarify something that is not obvious after the training, when they are back at work (online discussion forum, Q&A forum, time for face to face real time discussion, or alone with more time for thinking and then discussion etc.)
- Relatedly, giving time to discussion of ethics: how we handle difficult ethical situations during the training (face to face and online)
- Pre-training evaluation of knowledge and competencies concerning child maltreatment

## Materials

1. PowerPoint Slide presentation
2. Suggested videos for maltreatment personal experience accounts (instead of the personal trainer accounts)
3. Additional video resources on the topic

## Guidelines

### Guidelines for teaching the Module 1

Principle learning exercises in Module 1

1. Getting participants to understand who the trainers are. The trainer must introduce him/herself. All participants need to know how to contact him/her after the training, in case they have questions pertaining to the training or if they require signposting information.
2. Creating a learning atmosphere for a delicate subject; getting them motivated. Propose an ice-breaker exercise. Allow time for the trainer to get to know the group and for all participants to begin to get to know each other before starting to learn about such an emotionally delicate topic as child maltreatment. Ideally get each participant to introduce themselves and to describe their work with children.
3. Participants need to get to know each other; they should hear the other participants' expectations
4. Everyone agreeing on general training session rules (listen to each other, mutual respect, cut your telephone, be on time...).
5. Everyone understanding everyday practical issues during training: when is the pause, where to eat for lunch, toilets etc
6. Participants need to know the legal/administrative/institutional context of the ERICA Project: who is financing the ERICA project, in which countries it is taking place, and who is running ERICA in their country (institution, name of ERICA contact).
7. Having an overview of all 8 modules: distributing the programme
8. Understanding the overall aims of the ERICA training:

- understanding what sort of professionals ERICA is targeting = low threshold professionals
  - understanding the key objective of ERICA: preventing child maltreatment in the family
    - o define maltreatment
    - o define family maltreatment
    - o define child = 0-17 years of age
    - o understanding that the objective is prevention: i.e. preventing maltreatment from happening, preventing maltreatment from reoccurring; make sure that participants don't get stuck on "dealing with maltreatment"/"treating maltreatment" ; that's not the ERICA project
  - understanding the value of experiential knowledge with regard to child maltreatment: make sure participants are confronted with a testimony about maltreatment; confront participants with someone who gives testimony about having been maltreated as a child; they need to feel how they might react to a testimony about maltreatment (this will happen to them out in the field)
    - o ideally give different testimonies concerning children being maltreated in different ways, at different ages: during the training + online access to videos etc.
    - o children of different genders + different cultural origins
    - o ideally have a user trainer (i.e. a trainer who has been victim of maltreatment themselves).
  - Understanding right from the start that ERICA needs their feedback: Remember that an objective is to get feedback from the professionals when they come back 3 or 4 weeks later: the training must be "participative"; allow time for exchanges for comments; create an online chat; make the professionals feel that they are there not just to learn, but also to contribute.
9. Participants need to know what to do if they suspect a maltreatment situation. Keep in mind the fact that there will be people in the room - and people in the ERICA project –
- who have been victims of maltreatment themselves, who come from a family with a history of maltreatment, who have maltreated their own children

- who will be worried about being a witness of maltreatment in their professional life and not having done anything about it.
- who will begin understanding that a family they are currently working with is maltreating their child.
- who may be maltreating their own children / or who may have maltreated their own children

Participants need to know what to do if they suspect or discover maltreatment in their work. All participants have legal obligation to report maltreatment in their professional life, in their personal life. They need to understand their legal and moral obligations, and how this works in their country. And how to get help to do it. In many countries, there are anonymous helplines: what should I do in this situation?

10. Trainer must be aware that some of the participants, due to their own experiences, may find the material emotionally distressing and should therefore be able to provide appropriate support if necessary.

- Participants must be made aware they can step out of the training if they need breathing space, due to the sensitive nature of the topic.

11. Participants need to know where they can find the ERICA learning resources (for this module but also for all modules): Provide practical information on where ERICA's materials are "located" how one participants can access them. PowerPoint slides, documents, publications, agenda etc.

#### Suggested timing of Introduction module

Slides	Activity	Time
Before training starts	Preliminary evaluation	15 minutes
1-3	Welcome, introduction, ice breakers	10 minutes
4-9	ERICA overview, programme, housekeeping, ethical concerns and important contact info	10 minutes
10-14	Module aims, personal video accounts and brief discussion	25 minutes
15-20	Definition of maltreatment, project focus and intended audience	10 minutes

21-24	Course breakdown and time for questions	5 minutes
-------	---	-----------

**Total time** = 60 minutes excluding evaluation

## Maltreatment testimonies

### Guidelines for personal accounts by trainers

What they did to me?

The aim is to move the audience, to open an inner space that facilitates dialogue and exchange. It is essential to avoid making the professionals feel ill-at-ease and guilty – the risk is to make them unwilling to participate or, worse, to make them aggressive to the trainers.

Here are here a few « tricks » that an experienced user trainer knows how to use.

Firstly, the user trainer must work with his/her binome to prepare his testimony. Write it down if necessary

The user trainer presents an experience of abuse that he or she went through as a child. It can be:

- a specific situation in his or her life (a rape, an assault...);
- acts that he or she suffered repeatedly (psychological pressure, beatings...);
- an abusive situation that lasted for a long time and from which he/she could not escape (parents who did not take care of him/her, mother absent due to depression, abuse from a jealous brother or sister, having a disability and being the scape-goat of the family...);
- a « secret » in the family: being an illegitimate sibling, being born as a result of rape, being born after the prior death of a brother or sister, all kinds of secrets that children can carry without really knowing it...).

The testimony can be shared in two parts:

- A very factual description of what the user trainer actually felt during his/her experience
- And then, what they felt since the maltreatment experience, how it affected them in the longer term, their mind, feelings, capacity to learn, to live....

# Module 2: Child development and consequences of maltreatment

## Learning Objectives

Knowledge based:

- Developmental (intellectual, emotional, psychological, physical) milestones/ sensitive periods for each period in childhood
- Understanding of impact of violence, including bullying and neglect (inc. child to child bullying)

- Understandings/basic overview of theories of infant and child development (intellectual, emotional, physical, psychological) covering children of different ages
- Understanding of how different types of maltreatment can arrest/influence development and understanding different types of maltreatment in different periods of development
- Understanding of whether there are more or less critical /sensitive periods /other heterogeneities

Experiential Knowledge based:

- Understanding the impact of child maltreatment on a person's life: the experience of the expert by experienced member of the trainer team: discussion and exchange about their experience with the professionals. They are not there only to answer "knowledge-based" or "competence-based" issues but to tell their personal story and their point of view about the support they received and recommendation this person would give to the professionals being trained, i.e. "experienced-based" knowledge

## Materials

1. PowerPoint presentation
2. Animated videos for slides 28 (Physical and Motor development <https://www.youtube.com/watch?v=R2MMFw17IJA> ), 29 (Cognitive Development <https://www.youtube.com/watch?v=v2YLV5cNDWI> ), and 30 (Psycho-social Development <https://www.youtube.com/watch?v=A09saZWK4wk> ).

## Guidelines

### Guidelines for teaching the Module 2

Slide 1	<p><b>Child Development and Consequences of maltreatment</b></p> <p>Welcome the group to the second module; possibly recap on where it sits within all module content.</p>
Slide 2	<p><b>Child Development and Consequences of maltreatment: aims and objectives</b></p> <p>Give overview of the aim and objectives from slide.</p> <p>Highlight that begins in-utero, but that we will focus from birth.</p>

	<p>Consider brief brainstorm/discussion on what might negatively affect in-utero development of baby i.e. substance use, domestic violence (stress + actual physical harm).</p> <p>Emphasise that children’s behaviour could be different at different ages. Highlight how the development process is very intensive among children and adolescents and it is crucial to be aware of the most important milestones for each stage of the developmental process, so that support can be sought as soon as possible where indicated.</p> <p><i>Ask participants about their work experience with children and if they are interested in particular developmental period, this highlights areas where the facilitator can focus in more detail according to the group’s needs.</i></p> <p><b>Introduce format:</b> We will look at typical motor, cognitive, and psycho-social/emotional development for children aged 0-3, 4-6, 7-12, 13-18. Each stage will explore the potential influence of maltreatment on child development at each of these ‘stages’.</p> <p><b>Definitions:</b> Flag up the difference between what we mean by growth and what we mean by development: Growth refers to an increase in physical size of the whole body or any of its parts; a quantitative change in the child’s body:</p> <ul style="list-style-type: none"> <li>• Development refers to a progressive increase in skill and capacity of function;</li> <li>• It is a qualitative change in the child’s functioning;</li> <li>• It can be measured through observation and typical milestones.</li> </ul>
Slide 3	<p><b>Key characteristics 0-3 years</b></p> <p>Interactive moment: Encourage group to imagine a child at this age and child’s behaviour Give overview of development for this age</p>
Slide 4	<p><b>0-3 years: physical and motor development</b></p> <p>Talk through and develop slide content as follows:</p> <ul style="list-style-type: none"> <li>• Growth and maturation of brain and neural system</li> <li>• Rapid physical growth</li> </ul>

	<ul style="list-style-type: none"> <li>• Gross motor skills development: from lying to crawling, pulling self up on furniture, walking alone</li> <li>• Growth of self-organisation processes: i.e. toilet-training</li> <li>• Fine motor skills development:             <ul style="list-style-type: none"> <li>• can eat independently (hold a spoon, glass)</li> <li>• can get dressed and undressed unaided</li> <li>• can turn pages in book, play with small toys.</li> </ul> </li> </ul> <p>These examples can help trainees to understand these developmental milestones.</p>
<p>Slide 5</p>	<p><b>0-3 years: cognitive development</b></p> <p>State that the child is at the sensorimotor stage (Piaget) which means that they try to touch (and eat!) everything. This is child’s way of learning about the world.</p> <p>Expand on the points in the slide:</p> <ul style="list-style-type: none"> <li>• The infant has a natural curiosity and need to learn and explore the environment</li> <li>• Early explorations are innate reflexes i.e. sucking, random touching; later these actions become more goal directed such as reaching out for a toy</li> <li>• By the end of this stage the child achieves object permanence: the understanding that an object is still there even if they can’t see it</li> <li>• Explain that cognitive ability develops alongside communication</li> <li>• Learning by exploration and imitation (ask participants for examples e.g. children imitate caregivers behaviours and words)</li> <li>•</li> </ul> <p>Language and communication abilities – at the end of the first year first words (usually mum, dad etc.) at the end of this developmental period communication by simple/short sentences.</p> <p>Optional: consider watching the two videos regarding object permanence, they are very funny. Only the first 30-60 seconds of each video are needed to demonstrate the point.</p> <p><a href="https://www.youtube.com/watch?v=-gWJrZ7MHpY">https://www.youtube.com/watch?v=-gWJrZ7MHpY</a></p> <p><a href="https://www.youtube.com/watch?v=kV0o6RK54-M">https://www.youtube.com/watch?v=kV0o6RK54-M</a></p>
<p>Slide 6</p>	<p><b>0-3 years: emotional and social development</b></p> <p>Talk through and expand on the slide contents:</p> <p>Infancy (0-18 months) ‘trust v mistrust’ (Erikson)</p> <ul style="list-style-type: none"> <li>• Dependent on caregivers</li> </ul>

	<ul style="list-style-type: none"> <li>• If caregivers provide food/love/nurture – leads to trust, if not then mistrust</li> <li>• This stage is linked to attachment theory</li> </ul> <p>Early childhood (2-3yrs) ‘autonomy v shame and doubt’ (Erikson)</p> <ul style="list-style-type: none"> <li>• The child develops a greater sense of personal control</li> <li>• Choices and enabling a gradual gain in control leads to a sense of autonomy</li> <li>• Toilet training is an essential part of developing such control</li> <li>• If not supported in growing autonomy can result in shame and doubt</li> </ul>
<p>Slide 7</p>	<p><b>0-3 years: emotional and social development</b></p> <p>Run through slide:</p> <p><b>Emotion:</b> The child experiences a variety of basic emotions: sadness, happiness, anger, fear Understands a variety of emotional expression in other people Imitates emotions and their expressions Can intentionally evoke emotions Develops emotional regulation: from external regulation by caregiver to internal regulation; coping with emotional needs – delayed gratification Separation processes Differentiation between child and mother Initial separation anxiety Development of secure attachment parent as a secure base parental mirroring Individuation processes development of a sense of identity</p> <p>Self directed study prior to session or time out to do this now:</p> <p>The strange situation – early study <a href="https://bit.ly/3hK8p7w">https://bit.ly/3hK8p7w</a></p> <p>Secure attachment theory video: <a href="https://bit.ly/3b9HWOH">https://bit.ly/3b9HWOH</a></p> <ul style="list-style-type: none"> <li>• Attachment styles: <a href="https://www.simplypsychology.org/attachment-styles.html#infant">https://www.simplypsychology.org/attachment-styles.html#infant</a></li> </ul>

	<p>Discuss these resources i.e. any thoughts on the videos, do the participants have examples from practice regarding attachment generally and the differing attachment styles presented?</p> <p>Group work: Watch cultural variations and attachment – discuss; What are the groups thoughts on this? Have they noticed differences with the families with whom they work?</p> <p>Pause here to encourage group to brainstorm a few ideas of how maltreatment in the family might affect development at this stage.</p>
Slide 8	<p><b>0-3 years: potential influence of maltreatment on development</b></p> <p>Interactive moment: Go through slide/linking to suggestions from group</p>
Slide 9	<p><b>Key characteristics: 4-7 years old</b></p> <p>Interactive moment: Encourage group to imagine a child at this age and child’s behaviour Give overview of development for this age</p>
Slide 10	<p><b>4-7 years: physical and motor development</b></p> <p>Talk through slide with added detail Growth during this period is relatively slow Gross motor development in physical activity e.g. active play Increasing independence in self-care e.g. dressing self Fine tuning fine motor skills:</p> <ul style="list-style-type: none"> <li>• 3 year old: copy a circle and a cross – build using small blocks</li> <li>• 4 year old: use scissors, color within the borders</li> <li>• 5 year old: write some letters and draw a person with body parts</li> <li>• 6+ year old: buttoning clothing/playing a board game/draw picture of self</li> </ul>
Slide 11	<p><b>4-7 years: cognitive development</b></p> <p>Preoperational stage (Piaget)</p>

	<p>The child can use mental representations of objects; Play moves from using real objects to 'symbolic' play; development of imagination Development of attention process; readiness to start school</p> <p>A child's thinking is: perception bound (can only reflect experience) egocentric (cannot view things from another's point of view) intuitive (what they feel to be true) animistic (animals and objects are perceived as having 'human' characteristics) Symbolic' play (child is unicorn, fairy etc.); role playing (child is mum, dad, doctor, driver, cook etc.); imagination (imagine stories like in fairy tales)</p> <p>Watch the short video (79 second) about the importance of symbolic play – ask the group what is the role of symbolic play for young children? (i.e. social skills, turn taking, communication, practicing skills, modelling...)</p>
Slide 12	<p><b>4-7 years: emotional and social development</b></p> <p>Talk through and expand on the slide contents</p> <ul style="list-style-type: none"> <li>• 'Initiative v guilt' (Erikson)</li> <li>• The child begins to assert power through play and social interaction</li> <li>• Success at this stage gives confidence to lead, failure leads to self-doubt</li> <li>• Ability to understand the cause of emotions</li> <li>• Begins to develop communication strategies to cope with emotions</li> <li>• Development of 'theory of mind' (mentalisation proceses and seeing things from other people's perspective)</li> <li>• Fear as a natural emotion at this age (from fear of storms, fire etc. to anxiety of monsters under the bed)</li> </ul> <p>Pause here to encourage group to brainstorm a few ideas of how maltreatment in the family might affect development at this stage.</p>
Slide 13	<p><b>4-7 years: potential influence of maltreatment on development</b></p> <p>Interactive moment: Go through slide/linking to suggestions from group</p>
Slide 14	<p><b>Key characteristics: 7-12 years</b></p> <p>Interactive moment: Encourage group to imagine a child at this age and child's behaviour</p>

	Give overview of development for this age
Slide 15	<p><b>7-12 years: physical and motor development</b></p> <p>Talk through and expand on slide contents:</p> <p>At this stage a child's growth and development is characterised by gradual growth</p> <ul style="list-style-type: none"> <li>• There is increasing coordination and skill in gross motor ability i.e. sport</li> <li>• Fine motor skills are refined i.e. musical instrument, sewing etc.</li> <li>• Puberty begins: the development of secondary sexual characteristics</li> </ul>
Slide 16	<p><b>7-12 years: cognitive development</b></p> <p>Talk through and expand on slide contents:</p> <ul style="list-style-type: none"> <li>• Children at this stage are at the concrete operational stage (Piaget)</li> <li>• There is sequential logic and flexibility to thinking</li> <li>• Children are now able to seriate objects e.g. smaller to larger, and classify with more than one attribute and with hierarchical thinking</li> </ul> <p>In summary: Thinking bound by concrete experiences. Inductive and deductive reasoning begin to develop.</p> <p>Optional: consider watching Samuel video <a href="https://bit.ly/3gQ7H7y">https://bit.ly/3gQ7H7y</a> to illustrate concrete operational thinking in a child (2 minutes), discuss – there is some variation in ability in relation to age, what might contribute to this? (emphasis on schooling/social class? Etc.)</p>
Slide 17	<p><b>7-12 years: emotional and social development</b></p> <p>Talk through and expand on the slide contents:</p> <ul style="list-style-type: none"> <li>• At this stage children enter the ‘industry versus inferiority’ life stage/<b>also known as the latent period</b> (Erikson)</li> <li>• The peer group and other authorities beyond parents (e.g. teacher, coach) become significant and a major source of the child’s self-esteem</li> <li>• Usually same sex peer group</li> <li>• Typically the child feels the need to win approval by demonstrating specific competencies that are valued by society and begins to develop a sense of pride in their accomplishments</li> <li>• Success in this stage will lead to a sense of competence</li> </ul>

	<p>Pause here to encourage group to brainstorm a few ideas of how maltreatment in the family might affect development at this stage.</p>
Slide 18	<p><b>7-12 years: potential influence of maltreatment on development</b></p> <p>Interactive moment: Go through slide/linking to suggestions from group</p>
Slide 19	<p><b>Key characteristics: 13-18 years</b></p> <p>Interactive moment: Encourage group to imagine a child at this age and child's behaviour Give overview of development for this age</p>
Slide 20	<p><b>13-18 years: physical and motor development</b></p> <p>Talk through and expand on slide contents:</p> <ul style="list-style-type: none"> <li>• Consolidation and proliferation of gross and fine motor skills</li> <li>• Boys and girls experience a growth 'spurt' in the teenage years, between 10-14 years for girls and 12-16 years for boys</li> <li>• Boys can gain between 7-30kg in weight and 10-30cm in height</li> <li>• Girls can gain between 7-25kg in weight and 5-20cm in height</li> <li>• Puberty: the development of secondary sexual characteristics accelerates in the teenage years as the body prepares for reproductive capability.</li> <li>• For girls there is breast enlargement, pubic and axillary hair growth, and menarche or periods start – although this can occur in girls as young as 8yrs</li> <li>• For boys there is testicular enlargement, pubic hair growth, the voice deepens and facial hair growth</li> </ul> <p>Signpost to NHS Stages of Puberty for more detail <a href="https://bit.ly/34PrEce">https://bit.ly/34PrEce</a></p>
Slide 21	<p><b>13-18 years: cognitive development</b></p> <p>Talk through and expand on slide content:</p> <ul style="list-style-type: none"> <li>• Young people at this age enter the 'formal operational' stage (Piaget)</li> <li>• This stage is typified by an increasing ability in abstract and hypothetical thinking</li> </ul>

	<ul style="list-style-type: none"> <li>• However, this ability is limited by experience - <b>Adjustment to reality/participating in 'adult' roles within society</b></li> </ul> <p>Optional: See Enzo video for more information <a href="https://bit.ly/3hK4yY2">https://bit.ly/3hK4yY2</a> (2 minutes). Encourage the group to think about how this age group can be quite advanced in some areas and not in others – specifically where they have no previous experience of a situation. Check our expectations for this age group.</p>
Slide 22	<p><b>13-18 years: emotional and social development</b></p> <p>Talk through and expand on slide content:</p> <ul style="list-style-type: none"> <li>• At this age young people enter the 'identity versus role confusion' life stage (Erikson)</li> <li>• The young person begins to explore their independence and develop a sense of self</li> <li>• They may experiment with different roles, activities and behaviours</li> <li>• The importance of peers and popular culture increases</li> <li>• Emotional lability - 'mood swings' mainly due to hormonal changes</li> <li>• Prevalence of depression and anxiety; suicide is one of the leading causes of death in adolescence (Glenn et al 2020)</li> <li>• Exploration of intimate relationships and building romantic relationships</li> </ul> <p>Can result in Identify crisis – results in strong sense of identity or identity crisis, if disordered.</p> <p>Pause here to encourage group to brainstorm a few ideas of how maltreatment in the family might affect development at this stage.</p>
Slide 23	<p><b>13-18 years: potential influence of maltreatment on development</b></p> <p>Go through slide/linking to suggestions from group</p>
Slide 24-26	<p>General aspects for positive development:</p> <p>Slide 24: Food – discuss eatwell plate what can negatively affect nutritional status for children i.e. knowledge, finances, lack of routine, parents unable to provide regular nutritious meals due to health issues etc.</p> <p>Signpost to further resources @ <a href="https://www.nhs.uk/change4life">https://www.nhs.uk/change4life</a></p>

	<p>Slide 25: Sleep - discuss sleep hours/what can negatively affect sleep ie routine, devices, hunger, anxiety etc</p> <p>Signpost to further resources @ Harrogate and District NHS Foundation Trust: <a href="https://www.hdft.nhs.uk/services/childrens-services/growing-healthy-north-yorkshire/sleep-guide-for-parents-of-5-11-year-olds/">https://www.hdft.nhs.uk/services/childrens-services/growing-healthy-north-yorkshire/sleep-guide-for-parents-of-5-11-year-olds/</a> (there are two good videos here for younger and older children in relation to the importance of sleep)</p> <p>Slide 26: Exercise – discuss exercise – 60 mins once walking/30 minutes for under 1s crawling etc/what can negatively affect ability to exercise – caring commitments/facilities/concerns regarding safety/disability etc</p> <p>Signpost to further resources @<a href="https://www.nhs.uk/change4life">https://www.nhs.uk/change4life</a></p>
<p>Slide 27-30</p>	<p><b>Animations</b></p> <p>Optional as may have seen these as preparation work:</p> <p>Introduce the group to the animations; either view during the session (time permitting) or signpost group to them as a consolidating activity in their own time.</p>
<p>Slide 31</p>	<p><b>References and additional resources</b></p> <p>Sum up In this module we have:</p> <ul style="list-style-type: none"> <li>• Considered general safeguarding principles regarding family engagement with child development reviews and health provision</li> <li>• Provided summary animations for the broad development areas of childhood motor, cognitive and psycho-social development</li> <li>• Given a basic overview of development in relation to children aged 0-3, 4-7, 8-12 and 13-18 years</li> <li>• Additional resources have been suggested to illustrate specific principles</li> <li>• An overview has been given regarding the possible consequences of maltreatment for each age range</li> </ul> <p>Signpost to references and further resources.</p>

## Guidelines to provide for trainees in relation to Module 2

### Suggested individual learning activities prior Day 1

We appreciate that different professionals will have varying degrees of education regarding child development. Facilitators should contact you in advance to ascertain your learning needs and tailor the session in response. This will need to be according to one's needs. There will be variability in cohorts – however whether similar or variable in professional background there will be a range of experience within the group from which members can learn.

**As an introduction to the development theory in this module we would recommend that you watch these animated videos. These will give you a brief overview of the developmental stages of children from infant into early adulthood in preparation for more detailed information in the facilitated session.**

When you are watching these videos think about how child maltreatment impacts these stages of development across each of the domains (Physical, Cognitive, Social and Emotional)

Videos are available in files section on teams or on the following links:

Animation 1 Video and physical and motor development (1:13 min)

<https://tuni.cloud.panopto.eu/Panopto/Pages/Viewer.aspx?id=5b512a10-a3f1-4334-97d6-ac6e012c134e>

Animation 2 Video on Piaget's cognitive development theory (1:06 min)

<https://tuni.cloud.panopto.eu/Panopto/Pages/Viewer.aspx?id=c35d5bb7-5edc-4200-a2db-ac6e012c1324>

Animation 3 Video on Erikson's Psycho-social development (1:35 min)

<https://tuni.cloud.panopto.eu/Panopto/Pages/Viewer.aspx?id=21bfa07f-d254-47b5-b9dc-ac6e012c1379>

### Further optional pre-session preparation (20-40 minutes):

Foundation information regarding attachment and attachment styles. Two short videos and summary information about attachment styles. When you are looking at this material make a few notes about how it relates to your practice/personal experience.

The strange situation – early study <https://bit.ly/3hK8p7w>

## Animation transcripts

Animation 1 Growth and development (1:13 min)

[Growth and development](#)

Physical development. We'll be looking at the 5 stages of growth between infancy and young adolescence.

When newborn, a child will experience slight weight loss, but then will regain it. Newborn growth and development is typified by Cephalocaudal (head to toes) and proximo distal (centre to periphery). Movements are random, uncoordinated and reflexive. The awareness of newborn and infants is dominated by their senses. They will triple their birthweight by one year, as well as significantly increasing in length.

A toddler will increase in muscle strength and coordination, as well as in their motor ability. By 4 to 6 years of age there will be gradual growth and a honing of fine motor skills.

Later between ages of seven and twelve will be more gradual growth, increasing in their dexterity and their fine motor skills.

Around about age 13 is the beginning of puberty. Full pubertal development is typified by growth spurts.

Animation 2 Cognitive Development (1:06 min)

[Cognitive development](#)

Cognitive development. The first step we will look at is the sensory-motor stage. At this point a baby develops cognitive skills to think about their behaviours and react to different stimuli, such

as emotions, noises, or movement. This is what defines the sensory-motor stage. It would be quite common for a baby to find something funny or interesting and smile or giggle in response.

The pre-operational stage. It is during this time that children will engage in imaginative and symbolic play, as well as learning to manipulate symbols.

Concrete operational. It is this stage typified by logical operations, such as classification and reversibility, accommodating logical reasoning but still struggling with abstract thinking.

Formal operational. Adolescents entering this stage will gain the capacity of abstract thinking by manipulating concepts in their head, without the necessity of externalising the process.

Animation 3 Psycho-social development (1:35 min)

#### [Psycho Social Development](#)

Psycho-social development. This theory emphasises the importance of social interactions and relationships. Each stage builds on the previous and represents a conflict that is a turning point in development with potential for failure or growth. At this stage they are completely dependent upon their caregivers and if provided with food, love, and nurture it leads to trust. If not, then – mistrust. This stage is linked to attachment theory.

At this next stage, the child begins to develop a greater sense of personal control. Giving choices and enabling a gradual gaining control leads to a sense of autonomy. Toilet training is an essential part of developing such control. If they are not supported in growing autonomy, then they can result in shame and doubt.

In this next stage the child begins to assert power through play and social interaction. Success at this stage gives confidence to lead and failure leads to self-doubt.

At this stage, the child should gain a sense of pride in their accomplishments and their abilities. Encouragement leads to a sense of competence and failure leads to a sense of inferiority.

At this final stage, the young person strives to develop a sense of personal identity. Failure at this stage leads to role confusion and a poor sense of self.

# Module 3: Recognising early signs of child maltreatment within the family

## Learning Objectives

Competency based:

- a) Ability to spot typical/ classical observable signs that children may be suffering maltreatment of various kinds, including:
- Physical signs
  - Racial discrimination, cultural and inter-cultural norms, gender norms
- across children of different ages, stages, gender, family constellations, and social contexts
- b) Distinguish between what might be considered 'normal' phases of development (drawing on knowledge from module 2 and sensing that there may be a problem
- c) Understanding that various forms of maltreatment may intersect and signs may be difficult to identify

## Materials

1. PowerPoint Presentation
2. Case studies

## Guidelines

### Guidelines for teaching the Module 3

How to use the Case Studies (Slides 7-12-18-23)

The ERICA Training is meant to be as interactive as possible, the case studies should be used as ice breaking material to facilitate discussion among the participants. However hard and delicate, the participants should be encouraged in talking about their own experiences with child abuse both in their personal and professional lives. Since the topics of our training are very delicate it is very important to avoid being insistent and approach the discussion cautiously only once the trainer feels the participants are at ease.

Here are a few question examples to ask after reading the case studies:

- What signs we discussed together did you recognize in the story you've just heard?
- Is there a moment in the story where you think the abuse could have been prevented?
- Do you have similar stories that you'd like to share?
- Have you ever observed in your professional or personal life examples of abuse such as the one discussed?

We don't advise reading all the case studies, choose a few that you find could stimulate the discussion the most. Reading a case study takes about two minutes, try discussing it with the participants for about 8 minutes.

It is crucial to remember that, although we provide suggestions on how much time should be spent on each part of the training, the individual trainer in their specific context should not feel obliged to respect the times here recommended. If you feel like the audience and the trainees would benefit from taking a little more time on a case study, feel free to take that time and to for example skip another case study to make up for that time.

Brief description of the case studies:

- Case study Mark: Example of emotional abuse and neglect. Things to notice: Physical, emotional and psychological abuse are frequently seen altogether and not as separate events because abuse easily causes more abuse.
- Case study Sarah: Example of emotional abuse Things to notice: rarely are things discussed altogether.
- Case study Jan: Example of emotional abuse. Things to notice: the difficulty in accepting the identity of the child.
- Case study Kate: Example of neglect. Things to notice: Although there are never any physical forms of punishment, the degree of violence is very high and the atmosphere described is very hard to put up with. Attempting suicide can be a very strong sign of abuse.
- Case study Jessica: A story of Sexual abuse. Things to notice: Very hard finding proof of abuse. Behavioral changes are sometimes the main or only sign of abuse. Regression in neurodevelopment
- Case study John: A story of Physical abuse and neglect. Things to notice: multiple fractures are typical signs of maltreatment. Brownish spots and anemia could be markers of previous undetected violence.

Examples of Emotional Abuse (slide 15)

*The explanation of different kinds of emotional abuse (Myers, 2011):*

**1. Rejecting:**

Harsh criticism, belittling, labeling, yelling, screaming or swearing at children, humiliating or demeaning jokes, teasing the child about their mental capabilities or physical appearance, refusing love, attention and touch.

**2. Ignoring:**

Inconsistent or no response to a child's invitations to connect, failure to attend to an infant's physical, social or emotional needs, refusing to acknowledge a child's interests, activities, schooling, peers, etc.

**3. Terrorizing:**

Screaming or cursing at a child, threatening/perpetrating violence against the child or child's loved ones/objects, unpredictable, unreasonable or extreme reactions, having unrealistic expectations accompanied by threats when expectations aren't met.

#### **4. Isolating:**

Leaving a child alone/unattended for long periods of time, not permitting a child to interact with other children or maintain friendships, keeping a child from appropriate social and emotional stimulation, not permitting a child to participate in social activities, parties or group/family activities.

#### **5. Corrupting:**

encouraging or rewarding unethical or illegal behavior (misusing drugs, stealing, cheating, lying, bullying), giving a child or misusing in the presence of a child: drugs, alcohol and other illegal substances. Allowing or encouraging children to engage in behavior that is harmful to the self or others

#### **6. Exploiting:**

Having expectations beyond the developmental stage of the child, requiring a child to care for a parent or siblings without regard for the child's age or ability, using blame, shame, judgment or guilt to condemn child for behavior of others (parents/siblings), having unreasonable expectations to perform chores or household duties

## Case studies

### Mark (2y)

His mother decided to leave his father. The grandparents look after the grandson while his mother is at work. Mark's mother is in therapy to "get over some things of my past relationship". Although rules were set to regulate when and where Mark's father could see his son, the father believed the rules made no sense and felt that the boy needed to see him more often. Recently, while Mark was on a walk with his grandmother, Mark's father, despite the strong crying of the child, snatched him from the hands of his grandmother. Mark's grandmother asked his father to let her reassure her terrified grandson and tell her where and for how long he was taking him. Mark's father insulted the grandmother and pushed her. He had not previously informed Mark's mother, who was at work, that he wanted to meet his son that day. The father's aggressive behavior and the child's crying drew the attention of bystanders, who called the police. The police established that the father returned to work after the incident, placed the child in the care of his girlfriend, whom Mark did not know. After returning, Mark clung to his mother tightly, refused to eat, and at night got a very high fever.

## Sarah (10y)

Her parents are divorced. She has been living with her dad and his new family for two years. Her father picked her up from school and, without her mother's consent, took her to the home where Sarah grew up. He reported to the police that the mother was neglecting their daughter and that she had an alcohol problem. Sarah missed her father and was initially glad to be living with him. The father was nice to her and gave her various gifts, he spent a lot of time with her. Currently, Sarah's stepmother, often yells at Sarah, challenges her, makes her look after her step-siblings. She tells her that she is lazy and that she got bad genes from her mother. When she tries to talk to her father about the stepmother's behavior, Sarah's father tells her that she should be grateful to his partner for raising her. The stepmother complains to her father about Sarah, saying that she is a bad child, that she doesn't keep the house tidy and doesn't care about her personal hygiene. Sarah's father starts thinking that Sarah might be lying because she's having a hard time adapting to her new family. Sarah's father has a negative opinion about Sarah's mother. He tells her that her mother wanted an abortion, that she is mentally ill and is dangerous. He tells Sarah that for her sake she shouldn't see her mother, because nothing good will come of it. Sarah's mother is raising her younger brother, she fights in court to be able to resume contacts with Sarah. She has tried to see her daughter many times, but the father claims that the daughter is afraid of her mother and does not want to see her.

## Jan (12y)

He is musically gifted. He composes his first musical pieces and plays the guitar perfectly. Music is his great passion. The family is well off. His father runs his own construction company. Mom is an accountant and supports her son in pursuing his passion. The father, on the other hand, is disappointed with his son, he does not understand how a boy his age can dream of a music career. A father wants his son to be tough and strong. He forces him to play soccer. He criticizes when he tries to explain that he prefers to play the piano. He accuses his wife of raising her son as "a parasite". Several times his father threatened to throw him out of the house to "show him what real life is like". The father often refused to pay for music classes. One time he even sold Jan's guitar, which he had received from his grandmother for his birthday. Recently, the boy had a severe panic attack. When the teacher at Jan's school invited the parents to discuss about Jan's behavior and panic attack, Jan's father explained in tears: "I'm just afraid he won't make it, I just don't want him to be a failure."

## Kate (15y)

She was referred to a psychologist by a teacher who found her unconscious in the school bathroom. After being brought to a hospital, urine tests showed high levels of benzodiazepines and among Kate's personal belongings an empty bottle of Xanax was found. After waking up the girl explained that she felt like her life was not worth living since she couldn't get anything right. As Kate opened up she told the doctors of the rules that her mother had set in their house, including a curfew, the prohibition of going out with friends, especially when they're boys. Kate keeps repeating of how she hates herself for being fat and ugly (although she is thin and has a normal BMI) and she asks the doctors to not tell her mother about what happened because of her feelings of shame. While crying she adds: "My poor mother, she works like a dog to put food on my table, and this is how I repay her."

## Jessica (11y)

Jessica is 11 years old. She's a bright student, although her teachers frequently scold her for chatting during lessons, and has a very good sense of humour which makes her quite popular in her class thanks to her wit and jokes. She's an only child and lives with her parents with whom she has a wonderful relationship. In the summer between fifth and sixth grade they decide to spend their summer vacation at the seaside and invite some old friends with them who have children more or less Jessica's age. The vacation goes well, but after returning home, one night, while sleeping, Jessica wetted the bed. Jessica's parents are confused, this hadn't happened since Jessica was a toddler. Their family doctor gives Jessica a few behavioral suggestions: writing down a sleep diary, being very careful to empty her bladder completely before going to bed, trying to drink less during the evening, etc. Although she makes all these behavioral changes, night after night she continues to wet the bed until finally the doctor, not knowing what else to do, prescribes her some drugs that reduce the bedwetting incidents. About a month later, a teacher calls Jessica's parents telling them he's a bit surprised of the worsening of Jessica's grades and of how little she talks and jokes in classes compared to the previous year. Although these changes may be just temporary and are sometimes common in adolescent girls, the teacher asks them if anything happened in the family during the summer. Jessica's parents start to grow anxious, they talk to the teacher about the bedwetting incidents and the teacher tells them they could be linked to distress. When Jessica comes back home, the parents ask her to sit down and discuss what's been going on, she's very evasive, and tells them everything's fine. When Jessica's father asks her if anything strange had happened during the

vacation, Jessica looks upset, and after her parents insist that she must tell them if anything happened, she tells them that Mark, one of their friends on vacation with them, one night had walked into her room and showed her his penis and made her touch it. She felt very guilty and frightened afterwards and felt relief confessing this. Jessica's parents hugged her, and told her they would immediately call Mark. Jessica asked them not to, but they did anyway. Mark denied these claims, and so did his wife. Since there wasn't any proof, and Jessica's parents were afraid of causing more harm, they decided to not alert the police and only send Jessica to a psychologist so that she could talk about this horrible experience.

## **John (7 months)**

John, a 7-month old boy with a history of multiple fractures, is referred by a general practitioner to a private hospital and is admitted to the orthopaedic ward where he appears to have a swollen left arm and leg, and a high fever. A week prior to admission he was brought to the emergency unit, accompanied by his aunt and house-maid, after falling from a swing. John did not pass out and didn't significantly change his daily activities. When the incident occurred, he was under the care of his baby-sitter while his mother was out of town. On physical examination brownish spots on the chest, abdomen and neck were found. He seemed in pain when the doctors touched his arm and showed impaired movements of his limbs. Laboratory exams showed also anemia and multiple fractures were recognized. Investigation by a multidisciplinary team including police officers was performed but nobody was arrested or accused. After 2 years, he was living under the care of his mother and grandparents and had no more significant falls or fractures.

# Module 4: Understanding risk factors for child maltreatment

## Learning Objectives

Knowledge based:

- Knowledge of previous research that identifies family and parent/guardian risk factors such as intergenerational issues, mental health, substance misuse and social contexts (housing, employment etc.).
- How this can manifest itself in parenting practices e.g. safety/violence as well as interact with these issues
- Differences/heterogeneities in these factors across contexts, including cultural differences in parenting practices, and how to use these for the prevention of maltreatment
- Have knowledge about how pandemic responses can exacerbate existing risk in families due to lockdowns, reduced interaction with other contexts such as school, reduced social context and isolation, screen time, and put extra pressures on vulnerable families through financial, health, housing and other social factors (financial, substance misuse etc)

## Materials

1. PowerPoint presentation

## Guidelines

### Guidelines for teaching the Module 4

**Aim:** To give participants a basic understanding of risk factors related to child, family and parent/guardian in their own cultural context. In addition, after this session participants will have knowledge of how pandemic responses can exacerbate existing risk in families.

### Timetable

Section	Timing	Content
1	10 min	Introduction to the session Definition of risk factor, risk factors vs. protective factors The relation between risk factors and context (PP slides)
2	30-40 min	Presentation of risk factors ACE and risk factors (Videos, group discussions and PP slides)
3	10 min	Pandemic responses exacerbating existing risk in families (PP slides, class discussion)

All slides have been developed based on international research literature review and related references.

During lectures we recommend trainers to have an interactive session by encouraging participants show up their own thoughts/questions/experiences. This is especially important when you are presenting the risk factors (slides 7-22). On slides the risk factors are presented more as a list. This list works as a basis for the discussion. However, remember the timing of each section.

### Section 1 (slides 2-6)

- Give a brief introduction to the module: content, the structure of the module and timing
- Define what the concept of risk factor means and how it is related to a protective factor. Emphasize the balancing between risk and protective factors: even if risk factors exist in family there may be also protective factors which act as a buffer against risk factors and vice versa. There will be more discussion on protective factors on module 5.
- Even if the risk factors are presented one by one on the slides, it is essential to emphasize and clarify that no single risk factor or sign alone is necessarily indicative of maltreatment having taken place. It is very important to consider the situation of the child and family as a whole.

## Section 2 (slides 7-24)

- Teaching method for the slides 7-22 is discussion with trainees
- Regarding the risk factors it is essential for a trainer to take a closer look at the trainer's manual of module 6 (Risk assessment tools) before the training: reasons for the risk factors are presented there. This gives a more profound understanding of the context of risk factors.
- It is very important to emphasize to the trainees that risk factors are based on existing international research (The Finnish national clinical guidelines on child maltreatment). In accordance with the research knowledge the risk factors are presented in detail, e.g. specific group of individuals are mentioned on the slides. Some of these details may cause a feeling of to be culturally bias in the sense of points relating to lower income/single parent. However, it is important that trainees do not develop prejudice towards any one specific group of individuals.
- The Finnish national clinical guidelines on child maltreatment will be updated every 5-6 years. The latest update will be completed by the end of year 2021. The summary of guidelines is available on this website: <https://www.hotus.fi/wp-content/uploads/2019/03/maltreatment-hs-sum-eng.pdf>
- Risk factors have been grouped according to three themes (with subthemes): risk factors related to parents (1) and to family (2), a child (3). Every theme has its own title and there is a video link embedded to each title.
- In the beginning of each theme show the video and after the video give the participants a few minutes time to talk with the people sitting next to them (group with three people) and talk about what kinds of thoughts came up to them from the video. After the small group discussion encourage the participants to talk together about their thoughts: e.g. What do they think about these risk factors? Do they recognize them in their own culture? Do they have any other risk factors in their mind, which appear in their own culture? Go through the subthemes in a conversational style. It may be that discussion is so fruitful that you as a trainer are able to cover all subthemes within one theme on the base of that discussion. You don't need to go through every small detail of the risk factors. There are subthemes under every main theme and it is important to go through these subthemes and then take some examples of these detailed risk factors.
- There are some specific areas, which may need to be covered (e.g. professionals who abuse, single sex couples, religious influences on abuse, radicalization, forced marriage, 'honour killings'). The appearance of these areas may vary in different countries. Thus, it is essential that trainers view the situation of the country in question and discuss these areas according to that situation.
- Slides 23 and 24 are as if a preamble to module 6, where the risk assessment tool will be presented. Emphasize the importance of stopping intergenerational behavioral pattern regarding child maltreatment. It is important to emphasize that screening should be done by a professional and it is not a diagnostic tool for ACE but for possible need for child/family support.

### Section 3 (slides 25-31)

- The purpose of this section is to make the participants aware of how pandemic affects the families with existing risk factors for child maltreatment.
- Go through these slides as a lecture. If possible, show up your own experiences as a professional regarding this topic. After your presentation have a class discussion on this topic from your cultural point of view: how have the participants seen/experienced the effects of pandemic on children at their work in your country/culture? Have they identified any increasing risks for child maltreatment? If so, what kind of risks?

## Module 5: Risk assessment tools

### Learning Objectives

Competency based:

- Become familiar with and feel confident to use some common risk assessment tools and checklists for different kinds of maltreatment for children of different ages
- Be aware of difficulties of generalising checklists across contexts and need specificities for different kinds of maltreatment and children of different ages
- Be aware of the strengths and weaknesses of risk assessment tools and feel confident to use them with a critical and sensitive eye
- Feel confident about spotting and assessing possible maltreatment in the era of physical distancing, and how inter-agency working needs to take these factors into account

### Materials

1. PowerPoint presentation
2. Family needs checklist
3. Family needs checklist trainer and professional user manual

**Note:** The Family needs checklist presented in this module is in process of validation. Please do not promote it or use it as a fully validated tool.

## Guidelines

### Guidelines for teaching the Module 5

<b>Module 5: Risk assessment tools</b>	
<b>Aim</b>	To become familiar with child maltreatment (CM) risk assessment and some of the common assessment tools, and be able to use a low threshold family need assessment tool, that is based on international research on CM risk factors in early identification of familial risks and prevention of CM.
<b>Approximate timing</b>	50 min + 40 min (NOTE! time schedule is planned for one day training)
<b>Resources</b>	Module 5 Power Point slides (24 including references) The Family Needs Checklist with feedbacks (attached as PDF, link or printed version) Family Needs Checklist: Trainer and professional user manual version 3 Culture specific attachments
<b>Material</b>	Need for internet connection (Moodle platform) Pens and papers for group sessions Whiteboard and markers for the summaries and ideas if not done on computer.
<b>Supplemental material</b>	Finnish National Guideline is available here: <a href="https://www.hotus.fi">https://www.hotus.fi</a>
<b>Instructions for trainer:</b> This session contains very sensitive family issues. Therefore, the trainer needs to be interactive throughout the session and reassure that all the questions or perspectives are important to bring out to joint discussion.	
<b>Show module 5 slides</b>	
<b>Instructions for the slides</b> The first 50 min session includes slides 1-19	
<b>Slides 1-2 (5 mins)</b>	It is important to go through the ILO's and ask if any questions arise about these.
<b>slides 3-6 (5 mins)</b>	<b>These slides are mostly declaratory and can be just read through quite swiftly. In the end it is appropriate to ask if any questions or thoughts raised.</b> → <b>Why we need CM risk assessment?</b> CM is not a concern of one agency but all the child and family social and health service providers. It is critical that we all hold equal CM knowledge to be able to identify and address these

	<p>sensitive familial issues. Our joint aim is providing and improving family welfare. It is our ethical demand.</p> <ul style="list-style-type: none"> <li>➔ <b>Why do we need a tool for CM risk assessment?</b> Research evidence-based tools help us to examine and weigh familial risk factors against protective factors equally and consistently. It is impossible to remember all possible factors by heart.</li> <li>➔ <b>What tools are not for?</b></li> <li>➔ <b>Who is assessing?</b></li> </ul>
<p>slides 7-13 (10 mins)</p>	<ul style="list-style-type: none"> <li>➔ <b>Primary, secondary and tertiary prevention of CM</b> It is important to acknowledge all the levels of the prevention to be able to innovate, plan and implement support services through inter agency collaboration.</li> <li>➔ <b>Need for standardized and valid tools</b> We have different tools for different purposes. Most of them are currently used on the secondary and tertiary level when CM has already occurred.</li> <li>➔ <b>BRIEFCAP</b> Note that BriefCAP is a proprietary measure with the copyright belonging to Joel S. Milner PhD. A full CAPI should be purchased and utilize the specific items comprising the BriefCAP. Unfortunately it does not cover all the risk factors of CM, for example factors concerning the child.</li> <li>➔ <b>ISPCAN ICAST</b> Main constructs: Physical abuse, emotional abuse, neglect, sexual harassment, contact sexual abuse, witnessing IPV (Intimate partner violence). Subscales: Non-violent discipline, physical discipline, severe physical discipline, psychological discipline, neglect and sexual abuse. High content validity and both parents and children is reported via research. Requires paid membership of the ISPCAN. To be used in intervention trials. It cannot be used preventively.</li> <li>➔ <b>Need assessment</b> Working together with the parent and other professionals. The ultimate goal is to understand the family situation at hand as a whole, and discover the familial needs to prevent CM.</li> </ul>
<p>slides 14-19 (30 mins)</p>	<ul style="list-style-type: none"> <li>➔ <b>An example of a need assessment tool : Family Needs Checklist</b> The trainer introduces the measure to the trainees. Concentrate on familiarizing trainees with the checklist and feedbacks understanding its evidence base and how to utilize the module 5 trainer manual. Please provide the PDF or link to the checklist and, preferably</li> </ul>

	<p>deliver a printable version to all participants. The trainer explains to the trainees that the idea of the measure is that the parent fills up the checklist before the joint discussion. The parent may have filled up the online application or the printable version before appointment. The online version can be introduced via link by the trainer or tested by the trainees. Please note that the checklist is currently in validation process (2022-2024).</p>
<p><b>Instructions for the slides</b> The 40 min session includes slides 20-22</p>	
<p><b>Slide 20 (20 mins)</b></p>	<ul style="list-style-type: none"> <li>➔ <b>How to start conversation</b> ➔ In groups trainees create the ideas of the checklist as a basis for an interview in different situations or encounters, as well as a self-completed questionnaire (application) for parents. A case checklist (attached) can be used to imagine the real-life situation. (Cases can be different in each group)</li> <li>➔ The question is how to start and maintain conversation with the parent? Group work if possible 10 min and compilation of answers 10 min.</li> </ul>
<p><b>Slide 21 (5 mins)</b></p>	<ul style="list-style-type: none"> <li>➔ <b>Examples on how to make questions</b> ➔ Slide 21 includes examples of possible starting questions. Can be shown after the groupwork and discussed.</li> </ul>
<p><b>Slide 22 (15 mins)</b></p>	<ul style="list-style-type: none"> <li>➔ <b>Think, what early interventions or inter-agency work ideas are there?</b> This section includes familiarising oneself with known national support services and knowledge resources. (online surfing on nationally selected links), or inter-professional work within one organization, depending on the trainees' profession and work environment. In multiprofessional teams it is also important create the concrete ideas of developing supportive professional relationships to provide the most effective joined up service. Groupwork is possible and preferred (10 min). Brainstorming can be done separately continued by writing down the answers for joint discussion (10 min).</li> </ul>

# Module 6: Interventions in child maltreatment

## Learning Objectives

Competency based:

- What to do if you suspect maltreatment and legal obligations (depending on country context)
- Be able to judge the appropriateness of interventions within the remit of their level of contact with the children and their families, and know how to interact/engage with other agencies
- Be introduced to, and become confident to use some common intervention techniques that are suitable for a few different situations, which are tailored to children of different ages, and address particular types of abuse (sexual, emotional, etc.)
- Learn techniques to engage with families constructively on these issues, and how to deal with resistance to engage
- Learn techniques to provide support at key vulnerability points in children's lives, such as moving house, family disruption, changes in siblings, etc.
- Covid-19: Discuss/ Have an understanding of how engagement with children and families can be adapted, maintained and evolved through new means like technology development

## Materials

1. PowerPoint presentation
2. Case studies
3. Handout talking with children

## Guidelines

### Guidelines for teaching the Module 6

#### Before the workshop day:

## Legal obligations

Make sure that you know the national legal obligations for your workshop target group.

- Are there different legal obligations for different professionals (e.g. teachers, medical doctors, psychologists vs. any professionals working with children)?

## Local child-protection network

- Offer an overview about the most important agencies in the local child-protection network

Be prepared to provide the following information in detail (e.g. institution, phone number) for your workshop participants according to the local situation.

- emergency/immediate danger (e.g. police, emergency hotline youth authority)
- situations, with safeguard concerns, which are not emergencies (e.g. social service youth authority)
- „suspicious“ or ambiguous situations which should be monitored by professionals/experts for children at risk (e.g. specialized professionals for child protection, sometimes counselling is possible anonymously)

## Case Reports

- Become familiar with the case reports and decide, which intervention would be appropriate
- If your workshop is online → upload the case reports and other materials
- If your workshop is face-to-face → prepare copies

## Supervision and coping with challenging situation

- Schedule time at the end of the module to deal with challenging situations. Offer advice and brief supervision, not only for the case studies, but also for previous situations in the professional context.
- It is possible that participants who have experienced abuse themselves will come forward. Also, be prepared for how you will handle it in the workshop.

## Training schedule

### General advice & “Talking to Children” (10 Min).

- you can provide the content as a handout, if you wish

### Legal obligations and local information (10 Min)

- Prepare an example for each situation: emergency, serious safeguard-concerns, ambiguous situations, which need further counselling

### Teamwork I (20 Min)

1. Participants become familiar with the case reports
  - a. Face-to-face training: paper worksheets with case reports
  - b. Online training: case reports for download
2. Groups with 3-4 participants (also possible in online trainings, check out technical aspects it before the training day)
3. Participants discuss appropriate interventions for one of the case reports in the small groups
4. Collect and discuss the results in the whole workshop group

### Input basic communication skills for different dialog situations (children, parents/cargiver, other professionals) and “good practice” role-plays

- Key points on a worksheet (slide on paper or download)
- Prepare a suitable case for brief role-plays, demonstrate “good practice” for each dialog situation
- Helps also to reduce barriers to act in the following role-plays

### Teamwork II (30-40 Min)

1. Same small groups as in teamwork I
2. Very short role play, based on one of the case reports
3. Introduction: 1 person acts as him/herself, 1 person play acts the child/mother/father/caregiver, 1 person „observes“ and provides feedback afterwards
4. Focus: starting the conversation
5. discuss and find solutions in the group for challenging situations in the roleplays.

Trainer can join (online) small-group sessions to support and give feedback.

### Supervision and challenging situations (45 Min)

## Case studies

### **Child toddlers age (4y) [add a suitable name] GER: Damien**

Damian is four years of age. He lives with his mother, his father and his six year old sister. Damian's father is unemployed and his mother works part time in a grocery store. Damian speaks only in "two word sentences" and talks very inarticulately. He often walks to the kindergarten on his own, in the afternoon; his sister mostly picks him up. Damian's clothes are often too small and not appropriate to the weather. He often wears the same clothes for two weeks or more. He always seems to be hungry and steals food and hides it into his little backpack. Damian often has "little accidents" while playing at home; resulting in haematoma on back and thighs, his mother complains that he is "a wild boy". He avoids playing with male adults and seems to "freeze" immediately or hides himself if there is a loud quarrel among other children.

### **Child elementary school age (8y) [add a suitable name] GER:**

#### **Kimberly**

Kimberly lives with her mother, her mothers' new partner and three younger siblings. Her brother is four years of age; the youngest siblings are one year old twins. Kimberly and her brother have the same father. The twins' father is the new partner. Kimberly's dad has substance use problems and struggles with his life. Since he is unemployed, he cannot pay subsistence for Kimberly and her brother. Her brother has some cognitive developmental deficits and language impairments. Kimberly reports that the new partner harasses her and her brother whenever possible. He blames them as "dumb and far too expensive", he says that her is "fed up of paying and caring for another men's' kids". The twins are always very well dressed and have only the best available toys. Mother calls Kimberly "a little bitch" and predicts that she will end up like her father as a "crack whore living on the streets". She refuses to give her a hug, because she is "smelly". If money is short at the end of the month, breakfast at school seems to be the only meal for Kimberly. Often, she visits a neighbour for lunch or dinner. He helps her with her homework or watches her favourite series with her. He also buys sweets or little gifts, even a brand new smartphone. In the evening, they often share text messages or pictures with her new smartphone. If her mother and her partner go out at night, Kimberly has to look after the little kids. She mostly prepares breakfast for herself and her brother and accompanies him to his doctors' appointments or his speech therapy sessions.

## **Young adolescent (12y) [add a suitable name] GER: Mustafa**

Mustafa lives with his mother. His father died from cancer four years ago. After her husband's death, Mustafa's mother suffers from a major depressive episode and survived a suicide attempt. At this time, Mustafa moved temporarily to his grandparents. Recently, Mustafa's mom's mental health got worse again. She feels anxious, suffers from pain, does not want to leave the home, has difficulties to get up and often stays in bed for the whole day. Mustafa's uncle and his family live next door and are very involved in daily life. His aunt cooks and supports with housekeeping since Mustafa's mom got depressed again. His uncle has a very strict idea of parenting and Mustafa seems to be frightened of him. Some weeks ago, neighbours called the police. A verbal dispute escalated and ended roughly again, after the uncle found cigarettes and a small amount of marijuana in Mustafa's room. The whole family is very concerned that he will "go to the wrong path" and gets involved in criminal activities. His 17 year old cousin got the order to "look after him". Arguments between the boys sometimes get violent and end up that his cousin beat him up. In addition, Mustafa shows aggressive behaviour in the classroom towards other boys. He has to change class different times and after he threatened a teacher with a knife after school, he is threatened to be dismissed from school.

## **Adolescent (17y) [add a suitable name] GER: Celina**

Celina lives with her mother, her father left the family when Celina was five. Before parents got divorced, domestic violence occurs towards Celina and her mother. Celina works as a nurse in a retirement home, money is always sparse. The flat is quite small, Celina's mom sleeps in the living room. Celina shares her room with her dog, "my dog Sammy is my reason to stay alive" Celina said. Some evenings a week, Celina's mother drinks a lot of alcohol after work, to cope with stress. If Celina "annoys" her mother while she is drunk, she screams and threatens Celina that she will sell the dog or give him to an animal shelter. If things get worse, she beats her, sometimes with a belt or a broomstick. Celina has multiple scars on her arms, where she cuts herself with razorblades or squeezes cigarettes on her skin. She tries to hide those scars with long-sleeved shirts. Since six months, Celina is in a relationship with Leon. He is very keen to spend as much time as possible with Celina. He does not like it, if Celina meets her friends for a "girl's night" or goes out without him. Every day, Celina and Leon go through Celina's text messages and social media activities. Leon wants to know, if Celina chats with other guys. Some weeks ago, Leon heard a rumour that Celina met her ex-boyfriend at a party and danced with him. The next day, she gave a picture he posted on social media a "like". Celina reports that Leon "totally freaks out" and smacked her and spit in her face and shoved her towards a wall. After this, she was "a bit shocked" but forgave him, since he promised in tears that he will never do it again.

## Handout talking with children

- Approach the child. Signal that your readiness to talk, whenever he or she wants.
- Encourage the child to talk, without asking for too much.
- Respect the limits and give the child the time she or he needs.
- Use clear and age-adjusted language. Try to put yourself into the child's situation.
- Consciously react to signals. Do not let stay uncommented what has been said.
- Take care not to transfer your emotions (such as anger, disgust) to the child.
- Provide a feeling of security by believing the child and by assuring him/her that s/he is not guilty or responsible.
- Try to free the child from isolation by showing him/her that others of the same age have experienced similar things.
- Be valuating: tell the child that s/he is courageous when talking to you.
- Make the current situation clear to the child, and what could be the next steps (including help), and try to secure his/her agreement.

### Summary for "Talking with Children":

- Be on equal level with the child/adolescent
- Listen actively
- **Let the child speak**
- Summarize
- Stay neutral, do not evaluate

### Useful Types of Questions

→ Open Questions:

"What did you see?" – "What happened then?"

→ Determination Questions (when, where, who, what...):

“When on that day was it?” - “Where were you?” - “Who was there?”

→ Choice Questions:

“Where was it – in your room or in the living room?”

→ Yes-No-Questions:

“Did your mother say something?”

→ “As if“-stories, comparisons:

“You appear to me als if...”

à “What if“:

“What would happen if you talked with someone...?”

### Less Useful Types of Questions

→ Questions with Presumptions:

“Did Daddy say ...[XY]?”

→ Repetition of Questions

→ Accusations, evaluations, threats, promises:

“If you honestly tell me what happened, then you need not to go there again.”

## Module 7: Protective factors

### Learning Objectives

Knowledge based:

- Be aware of various protective factors for different kinds of child maltreatment covering family and parenting characteristics, positive parenting, socio-demographic factors, ethnicity and cultural factors, large social networks, and wider protective structures ( e.g. inter-agency working, child engaging in different non home contexts)

- Reflect on whether these protective characteristics are amenable to intervention, for example with regard to parenting practices and gender

## Materials

1. PowerPoint presentation
2. Animation isolation video ( <https://www.youtube.com/watch?v=oZU3E2CW6Y> )

## Guidelines

### Guidelines for teaching the Module 7

It is designed to be partly about knowledge (part 1) and partly about developing skills and awareness about how trainees could help to foster protective factors (parts 2 and 3) .

- The module is designed to last 1 hour. Provisionally, this is broken down into 3 parts:

1	20-25 minutes	Going through the PPT slides, plus stopping for clarifications (knowledge)
2	5 -10 minutes	Watching the animation video, and discussing the content (awareness)
3	30 minutes	Individual, group activities and class discussion (Awareness and skills)

Trainer specific notes for each section:

#### Section 1 : PowerPoint slides (25- 30 mins)

The slides have been developed based on literature review and input from child development experts. Tips and hints:

- You can read the text verbatim- but feel free to embellish with additional words or examples- and allow time for clarifications or questions from the audience.
- Slide 6 – ACEs- links back to risk factors module so you may want to remind trainees of this as they will have heard this term and these ideas before.
- There are several opportunities for whole class interaction and discussion and we suggest you do this,

- o e.g. on slides 7-10, which cover protective factors at different levels, these lists are not designed to be comprehensive and if trainees want to volunteer their own additional ideas here- great. Once these ideas are discussed indicate that this list is adapted from *Preventing and Responding to Violence Against Children and Adolescents. New York, UNICEF*. Provide this document as additional materials and encourage trainees to read Annex B in the document for the full list of protective factors extending being the family domain.
- o Slide 14, we encourage trainees to come up with extra factors that fit within the five domains of nurturing care ( the last bullet is all about that). Discuss additional area/country specific information about available protective factors, resources and organisations. If trainers have vast information about this, they might consider adding a slide here to summarise area/country specific information supporting protective factors.
- Slide 16-19 : Take some time through these slides and allow trainees to comment, suggest extra ideas, clarify meaning.
- o Maybe trainees have not come across the idea of life course at all, and you might need to spend some words explaining what is seen on the slide. Not to 'script' this, but start by explaining that we can think of someone's life as a chain or a path that stretches all the way from prenatal stage to old age, and the idea of the life course is that things that happen in early life/childhood can have a big impact on the entire trajectory of someone's life ( you could even mention ACEs again, of you think this will help comprehension) .
- o Then start by explaining that protective factors in prenatal period and infancy cover x, y and z ( slide 16); experiencing these protective factors affects progress and milestones in childhood and adolescence. e.g. children who are not experiencing healthy growth and development might struggle in school. People might question what is 'thriving adolescence' and you might throw this open for whole class ideas.
- o Slide 18 tries to get across the idea that success in childhood and adolescence in turn influences adult life success ( employment etc). But – crucially- you can see by the blue arrows how the influence of early child deprivation/maltreatment, would produce a cascade effect of problems in childhood and adolescence, and then adulthood ( this is sometimes referred to as 'the long arm of childhood' . Notice there is a blue arrow also directly from infancy to adult life ( i.e. sometimes these influences do not operate only through childhood and adolescence)
- o Finally slide 19 tries to illustrate how this cycle can be repeated generation to generation ( e.g. adults who struggle might deprive or maltreat their own children, and then the cycle might start again).

- o This is designed to be an ideal schema, we are not trying to say this will always happen. And it's also designed to be a positive message. If protective factors are present in childhood adverse adult situations are less likely, and if we start a virtuous circle this can be just as powerful as a vicious one.
- Slide 20 : brings together ideas of life course, nurturing care and enabling environment.
- Ensure you answer any questions or ideas you have about the slides before moving on.

### **Section 2 : Animation video and discussion (5-10 minutes)**

- Show the short animation video which is an example of how social isolation can be particularly detrimental when families relocate, but can be overcome by sensitive interventions from practitioners.
- After the video, ask people for their impressions. You could get a conversation started by asking the following:
  - o Did the situation seem realistic / ring any bells for anyone ? Has anyone got experience of such a situation either as part of a family or as a practitioner trying to work with such families ( almost everyone will! But try to tease out what were the factors which really helped to mitigate risks in that situation)
  - o What are key signs of social isolation? How can we react sensitively to these?
  - o What other possible risk/ protective factors were present in a story about a family moving ? (perhaps bring in ideas of international migration, language issues etc, different cultures etc) and how can we as practitioners respond to these
  - o How is this challenging in COVID times? E.g. online learning / consultations?

### **Section 3 : Individual and group discussion (25 mins)**

The last section is about building awareness and fostering confidence to intervene to help build protective factors. It is designed to be personal, because each practitioner works in a different setting and might have a different interaction style with children.

3.1 Individual work ( 5 mins) . Ask the trainees to spend 5 minutes thinking about the material so far, and thinking about the following questions ( all on slide 25) :

- Think about your professional role and how you interact with children, and also thinking about all of the preventative factors we've discussed.
- What do you think are the most important preventive factors you can help encourage, and facilitate through your work?
- What are the strategies you use to develop these right now?
- How could you change your practice to do more to develop these factors, for example in your interactions with children and their parents?
- In doing this, what challenges will you face and how can you overcome them?

The idea is that each individual trainee comes up with ideas for how they could better foster these protective factors.

### 3.2 Pair work/ small groups (10 mins)

Get the trainees to pair up or get into 3s, and then ask them to share what they have just developed, came up with and discuss these with the others. Encourage people to get together with practitioners from similar disciplines (better to be similar backgrounds as they can get a conversation started better, and share ideas?) .

### 3.3. Individual work (3-5 mins)

Ask the trainees to work on their own again, and based on these discussion ask them to develop a mantra / action plan of core principles that will help them to foster protective factors. This can take the form of a list, a rhyme, a simple sentence, whatever is most meaningful to them.

### 3.4 Whole class wrap up ( 5 mins)

Come back to a larger group and invite a couple of people ( if they feel comfortable) to share their mantras/action plans. Have your own up your sleeve in case no one is brave enough to get started.

### **Advice for online version of this training:**

Encourage / insist that people show their faces during the training. It really builds rapport.

**Section 1:** share your screen while delivering the PPT and invite people to post questions on the chat ( which you monitor and answer as they crop up ) . People can use 'raise hand' functions or chat for interactive sessions

**Section 2:** Again, share your screen during the video demo and then flip back to full class discussion with inviting questions, comments by raise hand functions or chat.

**Section 3:** A bit more complex. Zoom and Microsoft Teams has break out functions which enable partner/ small group sessions, which need to be pre-programmed with participants. Then is it easy to flip back to whole group interactions.

## **Animation transcript**

Let's look at social isolation as a risk factor for child maltreatment. Social isolation has been linked with disengaged parenting, as well as parental depression and feelings of loneliness. Isolation can therefore affect how well a parent is able to provide nurturing and engaged care to their children.

The impacts of isolation vary according to the child's age, while some impacts have a domino effect throughout the child's life. Not only can isolation affect cognitive development and functioning, it can harm a child's ability to form rewarding and healthy relationships later in life; or else impact self-esteem, resilience and coping mechanisms. Let's imagine a family who move across the country when one parent gets a new job.

(For one of the parents) the new job doesn't leave much time for life at home, placing the burden of parenting two children on one parent. Their new home is far from friends and family, and both parents feel the effects of loneliness and isolation. The parent left at home finds it difficult to care for the children when they are not in school or at nursery. They find it hard to respond to the children's needs, and find themselves feeling increasingly low and despondent. More and more the younger child is left on their own and struggles to understand the change. At nursery they play on their own, and seem to find it difficult to interact with other children.

The older child, too, feels how distant both parents have become, and at the same time finds it hard to fit in at their new school. They feel lonely and disconnected and begin to do worse in their studies, while spending hours looking at their phone each day. As they become more socially withdrawn and isolated, and without a nurturing environment at home, they turn to alcohol as a means of coping with their emotions.

One of the nursery teachers grows concerned about the younger child, noticing that they seem isolated and that they have trouble with some aspects of learning. They decide to talk with the parents, and realise there's a problem. They make them aware of the support available to them, encouraging them to ask for help and become involved in community events. The teacher meanwhile fosters a safe and nurturing environment in the nursery and establishes a secure and rewarding relationship with the child.

At school, a teacher also encourages the older child to take part in extracurricular activities. Though hesitant at first, joining an afterschool club introduces the child to new friends and lessens their sense of loneliness; it helps them to create new meaningful relationships and having people that care about them boosts their self-esteem.

Although the issues faced by the family might not be entirely resolved, the intervention of the teachers helps to mitigate some of the effects of social isolation and their own relationship with the children works as a protective factor against other risks. Supportive peer relationships can also act as a protective buffer against certain risk factors.

However, enabling social connection is necessary but might not be sufficient alone. People may still be isolated and lonely while surrounded by people, or else relationships might not offer the form of support most needed. Instead, families need to be able to form sustainable, consistent, nurturing and trusting relationships that foster genuine social and emotional support.

Some risk factors cannot be easily resolved, like recovering from an addiction or structural issues such as racism and sexism, but protective factors can be strengthened to allow families to cope with adverse circumstances and thrive in the circumstances of their family.

## Module 8: Evaluation

In the process of developing this training programme evaluation was performed to assess its effectiveness. The outcome of the evaluation is being summarised with intention to publish.

The evaluation materials provided here are aimed to help you to evaluate the effectiveness of the ERICA training in your country for your trainee population and adjust it accordingly.

## Materials

1. PowerPoint presentation explaining the methodology to be viewed by trainers
2. Pre-training questionnaire
3. Post-training questionnaire

## Guidelines

Questionnaire administered at start of training, then at the end of 2 days.

Start of training: baseline knowledge and skills (Importance, awareness and competence)

End of training: knowledge, quality of training.

At the end of the training: evaluation of the intended learning outcomes for the 7 training modules

- How the learner used the material (dipped in and out, went through sequentially, etc.)
- What was useful and what was less useful
- What they missed and needed more of
- Impressions on mode of delivery e.g. slides, videos, live workshops etc.
- Whether they felt it was well adapted to their local context or needed more localisation
